

RAJ TRIPATHI

B.Tech — Artificial Intelligence & Data Science | KJ Somaiya College of Engineering, Mumbai
rajtripathi0305@gmail.com • +91 91122 99195 • LinkedIn • GitHub

PROFILE SUMMARY

Business-technology and AI/data problem solver with real-world experience inside a large chemical manufacturing environment, independently translating operational processes into digital, analytics and AI-enabled solutions. Currently working as an AI Evangelist at India Glycols, collaborating with business, operations, engineering and SAP stakeholders to understand complex workflows and build practical decision-support and workflow systems. Founder-level entrepreneurial experience includes securing pre-seed funding for a technology venture, alongside multiple national-level hackathon wins. Strong interest in applying technology, data and structured problem solving to complex business and digital-transformation challenges.

EDUCATION

B.Tech — Artificial Intelligence & Data Science (Honours in Applied Cyber Security)

KJ Somaiya College of Engineering, Mumbai | CGPA: 9.06/10 (with Honours) | HSC: 73.14% | SSC: 90.8%

PROFESSIONAL EXPERIENCE

AI Evangelist | India Glycols Ltd

Jun – Aug 2026 | Noida

- Embedded at the India Glycols Kashipur plant as the primary AI-focused contributor working with the business team; collaborated with operations, planning, sales, engineering, SAP stakeholders, plant personnel and business leadership.
- Independently learned manufacturing processes through plant visits, meetings, Excel files, operational plans, existing workflows, observations and stakeholder discussions, then mapped business processes, data flows and technology opportunities.
- Translated senior-leadership assignments into structured requirements, decision logic, user workflows, dashboards and AI-assisted solution prototypes across planning, procurement, logbooks, safety and compliance; mapped SAP integration concepts and data flows where relevant.

Co-Founder & CEO | MeshCraft Pvt. Ltd.

May 2024 – Jun 2026 | Mumbai

3D asset & AI tooling startup serving India's gaming and real-time development ecosystem — Closed in 2026.

- Secured **pre-seed funding** to build out the company's engineering and AI tooling roadmap.
- Developed data-driven **business cases and ROI models** — revenue forecasting, commission structures and unit-economics models to support funding and strategic decisions.
- Closed **12 paid client projects** in Year 1 across 3D assets, ML-assisted workflows and product engineering.
- Built and managed a growing team, establishing delivery tracking, engineering/asset review processes and quality workflows as the company evolved.
- Partnered with **Pashu.ai** (\$3M raised; 6 Lakh+ farmer reach) on its AI-driven cattle health platform, contributing to its product website and engineering/product specifications.
- Evaluated the changing economics of AI-driven 3D asset generation and subsequently concluded active venture operations.

Team Lead — Computer Vision | Godavari Biorefineries Ltd

Jan – May 2025 | Karnataka

- Led a **5-member team** to prototype an ML-based impurity detection workflow for industrial pipeline monitoring, applying computer vision and image-processing to a real operating problem.

Project Manager | The Stallion Project

Oct 2023 – Aug 2024

- Led cross-functional teams and drove **₹5+ Lakhs** in campaign revenue through structured planning, execution and analytics-driven performance tracking.

Team Vision Captain | KJ Somaiya College of Engineering

Feb 2024 – Aug 2024

- Founded Team Vision from scratch and led a **12-member** college team focused on AR/VR applications and immersive technology for real-world use cases.
- Directed exploration and development of AR/VR concepts including immersive exposure experiences for real-world fears such as heights and darkness, while coordinating team execution and project direction.

PROJECTS

NSU Plant Cockpit — Plant Planning & Decision-Support Platform

[india glycols nsu.netlify.app](#)

- Converted batch chemical manufacturing constraints into a master-workbook-driven planning platform covering demand, production, capacity, BOM/raw materials, packaging materials, scheduling, KPI views, economics and scenario/risk analysis.
- Structured deterministic/custom scheduling logic with a 3D plant representation and AI-assisted replanning layer for natural-language exploration, stakeholder interpretation and operational decision support.

Turbine & Boiler Dispatch Optimisation System (TBDOS) — Utility Dispatch Decision Support

[iglturbine.netlify.app](#)

- Built an advisory decision-support platform using historical operating data for LP/MP steam requirements, turbine allocation, HP steam requirement, day-ahead planning, what-if/outage scenarios, optimization logic and business/economic trade-offs; tested over 1,370 real operating hours.

IGL Digital Safety & Compliance Ecosystem — HSE, RCA, BBS & Training

[HSE Portal](#) | [RCA Studio](#) | [BBS](#) | [Training](#)

- Combined safety reporting, incident workflows, observations/near misses, RCA/CAPA, risk management, training compliance, dashboards, structured records and audit evidence into a compact workflow digitization ecosystem with AI-assisted support.

ACG Pharma — Pharma-Oriented Technology Exploration

[rajpharma.netlify.app](#)

- Self-initiated pharma/life-sciences project exploration focused on process understanding, workflow design, structured information and stakeholder-facing digital solution presentation.

FMCG AI Transformation Blueprint

[fmcgai.netlify.app](#)

- Prioritized 30 AI/analytics use cases across sales, supply chain, finance and HR by business value, feasibility, data readiness, risk and implementation roadmap; included forecasting, scenario analysis, governed RAG/text-to-SQL and invoice-validation automation concepts.

Financial Sentiment & Stock Prediction

- Combined financial-text sentiment with historical market data using RoBERTa and LSTM to study sentiment-driven stock movement.

ACHIEVEMENTS

- **Allianz Tech Championship — Winner | €3,000:** Built W.I.S.E., an AI-driven cybersecurity training platform using adaptive learning and behavioral risk modelling.
- **Periscope AI Multi-Agent Hackathon — Winner | ₹1 Lakh:** Designed a multi-agent LLM prototype using task decomposition, tool-use concepts and shared context.
- **ISRO × GMRT Cosmic Fest — Winner:** Built an ML-based radio signal classifier with a live analytics dashboard using real telescope data.
- **GenAI Mumbai Hackathon — Runner-Up | ₹10,000:** Recognized for real-world applicability, prompt engineering quality and structured problem framing.
- **Somaiya Innovator Award | ₹10,000:** Recognized for entrepreneurial impact and innovation within the university ecosystem.

TECHNICAL SKILLS

Programming: Python, SQL

Data & Analytics: SQL, data analysis, exploratory analysis, KPI dashboards, forecasting fundamentals, reporting, Excel, Power BI

AI / ML: Machine Learning fundamentals, regression, classification, anomaly detection, Generative AI, LLM applications, RAG, prompt engineering, AI assistants

Business Technology: Requirements analysis, process mapping, workflow digitization, solution prototyping, decision-support systems, stakeholder collaboration, business problem solving

Databases: Relational database concepts, PostgreSQL concepts, SQL

Tools: Excel, Power BI, REST APIs, Git, Canva, Gamma
